VHF Radio is the primary means of distress communication. It makes it possible to broadcast to, and receive from, all vessels and coast stations within the vicinity. This enables direct communication with the Coast Guard and other vessels in a position to render assistance in the event of an emergency. Mobile phones should not be relied upon as the only means of emergency communication at sea. Vessels operating on lakes, waterways and coastal waters that carry a mobile phone should ensure that it is fully charged and stored in a watertight container.
